

18 A r1 1954

Dear Joshua,

Thanks a great deal for your long and interesting letter. I was surprised to hear that the 15 tube exp did not work and that all died. I would give anything to be in the lab with your workers - what a tremendous amount of fun it would be.

I shall surely pursue the yeast comparisons and will let you know early in July when to send it etc. Do you have any information at all on the amt of DNA in the yeast you are dealing with.

Sorry these notes are so sketchy - but I shall do better when the ward and accident room days are over here at Hopkins.

Sincerely yours,

LARRY.
Lawrence L. Weed.
